

URETHRAL OBSTRUCTION IN MALE CATS:

Cat Owner Survey

If you own or have owned a male cat with a urethral obstruction (urinary blockage) that was treated medically (without surgery), please consider volunteering to take part in our study.

As a voluntary participant in this study, you would complete our 30-45 minute online anonymous survey.

We are particularly interested in your experience with advice pertaining to **HOME CARE**: food, water, litterbox management, individual space, social interactions and engagement in natural feline behavior.
